Usage Precautions

1. Plugs

1. Mating / Unmating

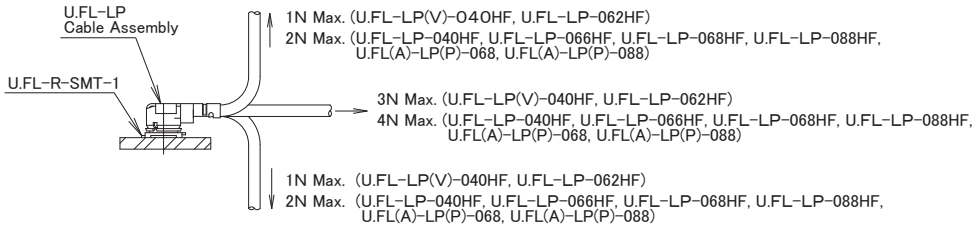

(1) To disconnect connectors, insert the end portion of U.FL-LP-N-2 and U.FL-LP(V)-N-2 under the connector flanges and pull off vertically, in the direction of the connector mating axis.
However for U.FL(A) (Solderless connection type), use U.FL(A)-LP-IN.OUT and pull out vertically.
When removing the connector directly, hold the connector lid and pull out vertically in relation to the connector mating axis. (Be careful not to damage the connector with fingers or nails.)

(2) To mate the connectors, the mating axes of both connectors must be aligned and the connectors can be mated. The "click" will confirm fully mated connection. Do not attempt to insert on an extreme angle.

2. Pull forces on the cable after connectors are mated

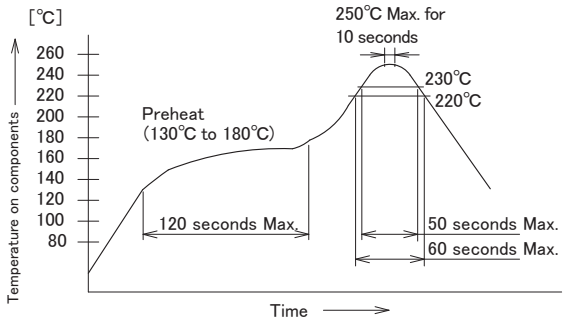

After the connectors are mating, do not apply a load to the cable in excess of the values indicated in the diagram below.

3. Precautions

Do NOT forcefully twist or deform wire.

2. Receptacles

1.Recommended Reflow Temperature Profile	 (1) The temperature represents the surface temperature of the printed circuit board at the connector leads. (2) Reflow soldering should be performed at a printed circuit surface temperature of 250℃ max. (3) In individual applications the actual temperature may vary, depending on the solder paste type, volume / thickness and board size / thickness. Consult your solder paste and equipment manufacturer for specific recommendations.
2.Recommended Manual Soldering	Manual soldering : 350℃ for 5 seconds
3.Recommended Metal Mask Thickness	0.1mm to 0.12mm
4.Reflow Cycles	up to 2 cycles

3. Operating Environment and Storage Conditions

1. Operating Environment

The connectors are not designed to operate in the following environments :

- Exposed to a excessive amounts of fine particles and dust
- Regions and places having a high density of sulfur dioxide, hydrogen sulfide, nitrogen dioxide or other corrosive gasses.
- Environments having large rapid variations in temperature.

2. Storage Conditions

Store in the Hirose Electric packaging.
Temperature : -10 to +40℃, Humidity : 85% max.
Use within 6 months of delivery.
Receptacles for which the storage period has elapsed must be tested for solderability to the PC board mounting surface.

3. About Discoloration of Silver Plating

The discoloration is only on the surface and the contact area is wiped so there is no problem with electrical contact
